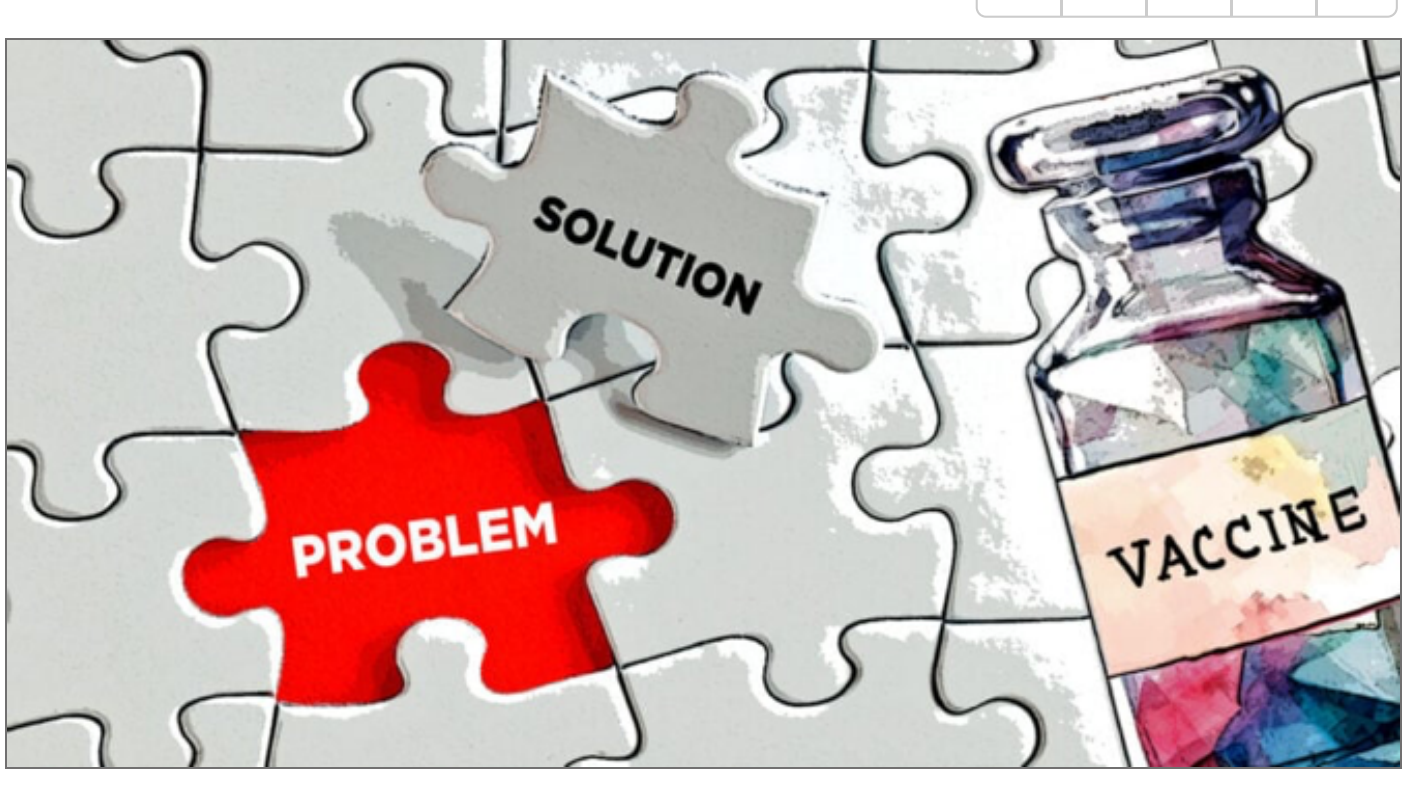
10 Problems With Vaccines — and 10 Solutions

Know someone who's "caught in the rigid, dogmatic belief in the infallibility of vaccines"? Dr. Clayton J. Baker proposes sharing his list of 10 "problems with vaccines" and following up with his list of 10 solutions.

By Brownstone Institute

116



Miss a day, miss a lot. *Subscribe to The Defender's Top News of the Day.* ***It's free.***

By Clayton J. Baker, M.D.

The uncritical, blind faith in vaccines is the preeminent sacred cow of modern medicine. (It happens to be its preeminent cash cow as well.) It is a quasi-religious, dogmatic article of conviction, rather than a sound scientific theory or an empirically-based clinical precept.

Vaccines have been controversial since their introduction centuries ago. Only in very recent history has there been a rigidly enforced orthodoxy of belief within the medical establishment that vaccines must be unanimously regarded as "safe and effective," no questions asked.

Even more recent is the practice of smearing and labeling anyone questioning this doctrine as a heretic: an "anti-vaxxer."

In fact, according to the Merriam-Webster Dictionary, the earliest known use of that now-ubiquitous epithet was only in 2001.

Religious faith has tremendous potential for good in society, but when it is misrepresented as science, its track record is miserable and deadly.

"Safe and effective" is not scientific shorthand or even an advertising slogan; it is a mantra. "Anti-vaxxer" is not a category of person, it is a charge of heresy. And just as vaccine critics are heretics, so are the high priests of vaccines, the Faucis of the world, the people who in their own words "represent science," are fanatics.

Does that really sound like science to you? Galileo, Semmelweis and a few others might disagree.

Any honest person who lived through the COVID-19 era in the United States will acknowledge that the U.S. Department of Health and Human Services (HHS) with its lengthy "alphabet soup" of agencies (the Centers for Disease Control and Prevention, or CDC, the National Institutes of Health, or NIH, with its National Institute of Allergy and Infectious Diseases), the U.S. Food and Drug Administration, or FDA (with its Center for Biologics Evaluation and Research), etc., promoted and repeated the "safe and effective" mantra regarding the COVID-19 vaccines throughout an era of intense public fear.

Any honest person will also acknowledge that the mainstream media avidly repeated and amplified the "safe and effective" mantra and stoked the fear, all while ruthlessly attacking anyone questioning that same dogma, labeling them "anti-vaxxers" or sometimes even "murderers."

Little to no mention was made — or allowed — of the gigantic financial incentives and other entanglements these powerful entities have with the vaccine manufacturers, nor the trillions of dollars involved.

Religious dogmas, especially those relentlessly inculcated by powerful forces under extreme conditions, are hard to break free from.

To readers who may know people caught in the rigid, dogmatic belief in the infallibility of vaccines, I offer the following 10 sentences.

Share them with friends, family and colleagues who cannot seem to reconsider vaccine dogma, especially those with an uncritical view of the current vaccine schedules.

Ask them to carefully read each of the 10 sentences below, one at a time, and ask themselves: does this sentence seem true or false to me?

If it seems false, on what basis do I think it is false? Then move on to the next one and do the same. (Some of the sentences are complex, but I am confident an intelligent layperson can understand them all.)

When they are finished with all 10 sentences, encourage your friends to ask themselves:

- Do they truly believe that every child in the U.S. should receive 20 or more different vaccines before age 18?
- Should vaccines ever be mandated?
- Shouldn't we, as an educated, free society, systematically review the official vaccine recommendations and, just as we would do with Grandma's overflowing pill box, reduce them to the truly necessary minimum?
- Shouldn't we reassert the autonomy of patients over their own bodies?

Here is the trouble with vaccines, in 10 sentences:

1. Like "antibiotics," "vaccines" are a large and diverse class of medicines, and as with all large classes of medicines, different products in the class work by different mechanisms, some being quite effective while others are ineffective, some being reasonably safe for appropriate human use while others are fraught with side effects and toxicities and therefore to assume that any large class of medicines — including vaccines — is categorically "safe and effective," is naïve, illogical, false and dangerous.

2. While the full extent of vaccine toxicity is undetermined, it is a historical fact that numerous vaccines have been proven to be highly toxic and even deadly to patients, via multiple pathophysiological mechanisms, including:

- Direct contamination of the vaccine (e.g. the Cutter incident).
- Disease caused by an unintended, pathological immune response to the vaccine (e.g. Guillain–Barré syndrome caused by the swine flu vaccine).
- Unintended contraction and/or transmission of the disease the vaccine was designed to prevent, caused by the vaccine itself (e.g. the current oral polio vaccine).Vaccine toxicity of unknown or uncertain cause (e.g. intestinal intussusception with the rotavirus vaccine, and fatal blood clots with the Johnson & Johnson COVID-19 vaccine).

3. In fact, the known toxicity of vaccines is so well-established that a Federal law, the National Childhood Vaccine Injury Act (NCVIA) of 1986 (42 U.S.C. §§ 300aa-1 to 300aa-34) was passed to specifically exempt vaccine manufacturers from product liability, based on the legal principle that vaccines are "unavoidably unsafe" products.

4. Since the 1986 NCVIA act protecting vaccine manufacturers from liability, there has been a dramatic increase in the number of vaccines on the market, as well as the number of vaccines added to the CDC vaccine schedules, with the number of vaccines on the CDC child and adolescent schedule rising from 7 in 1986 to 21 in 2023.

5. Of the 21 vaccines on the 2023 CDC Child and Adolescent Immunization Schedule, only a small minority (e.g. measles, mumps, rubella, varicella and HiB) are capable of providing genuine herd immunity, a fact that negates the common, population-based arguments for mandating the other vaccines, which comprise the sizable majority of the vaccines on the schedule.

6. The pharmaceutical industry has established an almost unimaginable degree of media control, institutional influence and regulatory capture, via its funding of other entities, as it is:

- The largest industry lobby in Washington, D.C.
- The second largest industry in TV advertising.
- A major source of personal revenue for high-level HHS "alphabet soup" agency bureaucrats, many of whom hold patent and royalty rights on pharmaceutical products.
- A major funder of influential physician organizations (e.g. the American Academy of Pediatrics and prominent medical journals).
- Involved in payment-based incentivization of practicing physicians, who frequently receive monetary bonuses for high rates of vaccination in their patient panels.

7. The COVID-19 mRNA vaccines were developed and administered to the public:

- Much faster and with much less testing than any other vaccines on the market.
- Under Emergency Use Authorization.
- Utilizing a technological platform that had never seen commercial use before, and, despite generating reports of vaccine-related deaths and serious adverse events at much higher rates than traditional vaccines.
- And despite the fact that they have been removed from the pediatric market in multiple other developed countries, the COVID-19 mRNA vaccines have already been placed on the CDC Child and Adolescent Immunization Schedule, just a little over two years after their introduction to the public.

8. There has been no systematic public accounting by the CDC (or any of the HHS agencies) for the more than 35,000 reported COVID-19 vaccine-related deaths and more than 1,500,000 reported COVID-19 vaccine-related adverse events reported as of July 7 to the CDC's own Vaccine Adverse Event Reporting System (VAERS), nor for the corresponding numbers of COVID-19 vaccine-related deaths and adverse events reported to Eudravigilance (the European Union's equivalent to VAERS), even as the CDC continues to strongly promote these vaccines for use, including placing them on the CDC Child and Adolescent Immunization Schedule.

9. By labeling the novel COVID-19 mRNA products as "vaccines," the definition of the term "vaccine" has become so broadened that essentially any medication that induces an immune response against disease may now be dubbed a "vaccine," thereby shielding pharmaceutical companies from liability under the NCVIA to a previously unimagined extent.

10. Vaccine mandates thereby compel citizens to submit to medical treatments:

- That is regarded under Federal law to be "unavoidably unsafe."
- Because they are unavoidably unsafe, their manufacturers are protected by Federal law from liability for harm done to citizens.
- Whose manufacturers and government agencies nevertheless promote publicly as "safe and effective," in direct contradiction to their legal status as "unavoidably unsafe."
- That has increased tremendously in number in recent decades, and, with mRNA technology and a broadened definition of the term "vaccine," stands to multiply at an even greater rate in the future.

I hope these 10 sentences will help the unconvinced to reconsider the central dogma surrounding vaccines. We, as a society, need to reject the article of faith that vaccines are fundamentally "safe and effective."

Vaccines, due to their unavoidably unsafe nature, should NEVER be mandated, and a thorough, product-by-product accounting of the individual vaccines needs to be done outside of government agencies.

How can we accomplish this?

Please forgive me if you thought I was done. I have 10 more sentences listing my proposed solutions to the trouble with vaccines.

I ask you to trudge through these as well. Most of them are shorter than the first 10. Thank you.

A proposed solution to the trouble with vaccines in 10 (more) sentences:

1. NCVIA should be repealed, returning vaccines to the same liability status as other drugs.

2. Federal law should be passed prohibiting the mandating of any and all vaccines at all levels of government.

3. Federal law should be passed prohibiting all direct-to-consumer advertising of prescription drugs.

4. Federal law should be passed prohibiting all collaboration between the HHS "alphabet soup" agencies (FDA, CDC, NIH, etc.) and either the U.S. Department of Defense (U.S. Army, the Defense Advanced Research Projects Agency, etc.) or the Federal Intelligence Agencies (CIA, the U.S. Department of Homeland Security, etc.) with regard to vaccine development or vaccine distribution to the public.

5. Federal law should be passed prohibiting all persons working within the HHS agencies from gaining any personal financial benefit from vaccines, including the gaining and holding of patents or royalties. And, civil servants in those agencies should be required to take an oath of office not to profit off of any products they approve, regulate or about which they advise the public.

6. A thorough and public investigation, including criminal prosecutions where appropriate, should be made regarding the key players (both public and private) involved in the development, marketing, manufacture, sale and administration of the COVID-19 mRNA vaccines, and following the investigation, there should be appropriate reform within the HHS agencies.

7. Detailed, independent, Cochrane-style reviews of every vaccine on the CDC vaccine schedules should be undertaken and made public, and no scientists with financial interests within the pharmaceutical industry should conduct these reviews.

8. Detailed, independent reviews of all reports from VAERS related to the COVID-19 mRNA vaccines should be undertaken and made public, and appropriate reforms to VAERS should be made.

10. A detailed Congressional review of the money trails related to COVID-19-era programs, including Operation Warp Speed and the Coronavirus Aid, Relief, and Economic Security (CARES) Act, should be conducted, focusing on fraud and abuse at all levels, including how private companies such as Pfizer and Moderna profited so enormously from taxpayer-funded initiatives.

10. An open, public discussion and debate should be undertaken on the appropriate role of vaccines in public health, including, among other issues:

- A critical review of the current medical dogma on vaccines.
- An accounting of the mistakes, abuses and potential lessons of the COVID-19 era.
- A thorough discussion of the undeniable conflicts between public health as it is now practiced and the fundamental civil rights of citizens.

The medical establishment's current dogma on vaccines ("safe and effective," no questions asked) and its corresponding catechism (the ever-expanding vaccine schedules) are in desperate need of reform. I submit that we begin with the above steps.

Reformers are not heretics, although they are commonly labeled as such by powerful persons resisting reform.

I, for one, am not a heretic, nor am I an "anti-vaxxer."

I don't want to throw the baby out with the bathwater. The problem is, when one looks closely at the vaccine schedules, there turns out to be a lot more bathwater and a lot less baby than advertised.

It is time for the profession of medicine and society as a whole to come out of the Dark Ages on this topic.

It is time for an open, forthright reevaluation of vaccines and their role in public health.

Yes, to everything. I think bringing back liability for harms of vaccines to children is crucial. I wish more parents were outraged at shot mandates for children to attend school. What is wrong with getting the measles? Is the shot safer overall, than getting the measles in a wealthy country. We can't apply the same logic to third world countries where malnutrition increases mortality from such infections. It is not a one size fits all. Bottom line if a parent vaccinates their child, another child's vaccine status is none of their business. Also, the measles vax wears off, so most adults are walking around essentially unvaxed unless they have updated, and most I know have not. So where is the fear and trembling about that, there isn't any, because it hasn't been propagandized yet.

What about Bronny James at 18 going into cardiac arrest? Did he take the shot? I heard a doc on the radio from St. Joseph's discuss the situation, nada mentioned about the shot. She said cardiac arrest is rare but occurs in athletes perhaps from a genetic problem, or low potassium, that is why they get physicals to rule out risks. Well, was he checked because something was missed. It is so frustrating to listen to these docs with a dogmatic attitude exclude the possibility that the shot may have been to blame. Their silence is deafening.

What makes you think this has anything to do with a vaccine?
0 0 Reply • Share ›

diana Mackin → CastleConnell
22 days ago
Meh, sort of, overall. 1. Been in this long enough to recall when "herd immunity" was from natural infection ONLY. This article suggests measles vaccines can confer herd immunity. Really? Let's say they can. So why all the terror at Disneyland a while back? If your child is vaxxed, you're perfectly safe, right? And they keep finding the majority of cases are vaccine-transmitted. Not the wild strain, but rather transmitted by the recently vaccinated, usually children. No to this one, for a variety of reasons.

2. Olders who actually got the measles generally have lifelong immunity. It's those who got the vaccine who do not! Previously, especially with normal childhood infections like chicken pox, local breakouts in kids re-inoculated the older folks. Protected us from shingles later in life. Now? Shingles. But, hey, they have a vaccine for that! Which will be as dangerous and ineffective as everything so far.

3. Back to measles only. I think it's vitamin A deficiency that leaves impoverished kids susceptible to serious, dangerous measles infection. If anyone does anything to intervene it should be in the form of usable vitamin A, and NOT pharma's vaccines!
2 0 Reply • Share ›

CastleConnell → diana Mackin
22 days ago
Exactly, also contracting measles as a child protects in adulthood against certain cancers. Also, mothers who had the measles pass on the immunity to their newborn up until the first year of life, the vaccinated mothers do not. Most people are unaware of all these facts, and yes low vit A is a disaster for kids with measles, this is common though in third world countries and so there is high mortality from the infection. The vax is a band aid solution in those countries, the kids need proper nutrition and clean-living conditions.

"By labeling the novel COVID-19 mRNA products as "vaccines," the definition of the term "vaccine" has become so broadened that essentially any medication that induces an immune response against disease may now be dubbed a "vaccine"...

No it doesn't shield, because medical science affirms there are no vaccines for cold viruses, COVID-19 being a cold virus, as is RSV, where on May 3 the FDA released another cold non-vaccine "vaccine". This is outright fraud. I can't believe I'm the only one who paid attention to high school biology!

"Not the cold, flu or covid. I maintain a robust level of Vitamin D which prevents all of those and more, based on at least a decade of studies."

Just as there are no vaccines for cold viruses, viruses don't exist. The virus was created for this current mass human extinction event.

Negative control tests were never performed to identify the existence of viruses.

Another critical point, virologists don't isolate and purify the genomes of "viruses", which can be performed by employing gel electrophoresis. Instead, virologists tear apart the DNA/RNA genomes into millions of molecules, then, now get this, use Alignment with a template DNA/RNA genome to reassemble the molecules into a fake DNA/RNA genome, otherwise the DNA?RNA genome would identify as human. And whee did the template come from, you ask? It was also manufactured by tearing apart and reassembling!

"1. The fact of Alignment

Virologists have never isolated a complete genetic strand of a virus and displayed it directly, in its entire length. They always use very short pieces of nucleic acids, whose sequence consists of four molecules to determine them and call them sequences. From a multitude of millions of such specific, very short sequences, virologists mentally assemble a fictitious long genome strand with the help of complex computational and statistical methods. This process is called alignment.

The result of this complex alignment, the fictitious and very long genetic strand, is presented by virologists as the core of a virus and they claim to have thus proven the

The best approach in dealing with vaccines is to completely avoid them, admit that they are all dangerous and that they do not protect. Standing up against all vaccines is proof that you are not afraid of the truth. Being frightened of being called an anti vaxxer proves the opposite.

My family members said the same thing to me. Then they said I would die if I caught covid. Then they said: you'll wish you had took the shot when you're hooked up on a ventilator. When I told them I don't want any of the shots, they said I couldn't be around them or go inside their homes until I got the shots.
Alot has changed since then-- especially when all the jabbed started getting sick and going to the hospital. I never caught it or got sick this whole time either--and I'm a smoker!!
I didn't see my mom for 3 yrs and she lives maybe a mile from my house.. It's shameful... and zero apologies from any of them. 😪

👍 4 👎 0 Reply • Share ›

Beatrice → T.Martin
21 days ago

You might find it interesting that there was a study during Covid that showed that nicotine smokers had much better outcomes if they caught covid. The reason is that nicotine is an anti-inflammatory and covid caused severe inflammation throughout the body. Nicotine by itself is extremely beneficial (I learned this from a cardiologist who smoked). It's the junk they put in cigarettes that makes smoking so toxic. Anyway, I have my own thoughts about the link between cigarette smoking and lung cancer. How many people died in the 1800's/early 1900's from lung cancer due to smoking?

👍 2 👎 0 Reply • Share ›

T.Martin → Beatrice
21 days ago

I read a paper about this--nicotine, smokers and covid. It wasn't a peer-reviewed paper, but an analogy of what may be happening. If I remember right it said that the nicotine coats our nicotinic receptors and that sars cov2 can't latch onto the receptors. I'll have to find that article again it was interesting

This is an excellent article. Thank you Dr. Baker. I've copied and kept your article to share and for future reference. I've met and know some people who are now quite ill that were coerced by the media, family and friends or mandated by their employers or their need to travel in order to conduct business or just lied to, tricked by the government into getting these mRNA shots. They'll sorrowfully and briefly mention their own or loved ones serious conditions. We look into each others eyes and we both will know why they or their loved ones are so ill. I don't say anything and I certainly don't blame them for going along with this genocidal agenda. What good would that do? The harm is done. Instead, I feel badly for them, for so many people, millions perhaps billions of people, are or will be (intentionally) seriously adversely affected. I have strong beliefs about the human potential to overcome adversity of any kind. I've personally experienced miracles and ongoing, surprising synchronicities. This has lead to my research into miracles, a fact of life, leading to a logical, albeit transcendent, explanation for these events

"RFK Jr. Wins Case Against Government For Vaccine Safety Violations"

RFK Jr Wins Case Against Government for Vaccine Safety Violations – Robert F Kennedy Jr. teamed up with Del Bigtree of the Informed Consent Action Network to take on the Department of Health and Human Services for vaccine safety violations and they have won. Their lawsuit has brought forth evidence that "vaccine safety has been neglected for over 30 years", and as we know it is nothing but a sham, showing that the government agencies we are to trust are not doing their jobs to ensure and improve the safety of immunizations.

The looks I get when I tell people if they say they 'have' to go get XYZ shot 'because their Dr said so'. I ask them 'sooooo, the very thing you're afraid of getting & running from...you're running TO & getting a shot that CONTAINS that ?' The look on their face is priceless.

Can we just think for ourselves please?!

👍 8 👎 0 Reply • Share ›

Beatrice → Jennifo
22 days ago

If I die from covid or anthrax or measles or Shingles, etc..., that's my choice and so, why are the people getting their "protective" vaccines concerned about me or anyone else not getting one? My mother would not allow me in her house because I wasn't vaccinated BUT SHE WAS. When I asked her why she would be afraid of me she was speechless. Then I told her that since she was vaccinated and shedding mutations, I wasn't going to go into her house and risk catching a virus from her. LOL

Yep! It's sad people listened to media over their own families.

👍 4 👎 0 Reply • Share ›

Wendy
23 days ago

Agreed. And in addition, we need to make all drug companies nonprofit. Profit motive is a severe conflict of interest when it comes to our health. It is painfully obvious that the drug companies of COVID cared nothing for the thousands they killed and millions they maimed at taxpayer expense, while raking in billions of our dollars. This is unacceptable on every level.

I am a heretic and a proud anti-vaxxer. To me the word is a badge of honor. Vaccines were always conceptually flawed. They all contain toxic adjuvants. Not one freaking vaccine in the USA has ever been tested in trials against a saline control group. The control group injections all contain all the adjuvants. They just pull the purported deactivated virus from them. But it's the adjuvants that kill and maim people so the phase studies are a total sham. The FDA has absolutely no rational reason for not testing them against a true saline control group other than that they are greedy and murderous psychopaths.

Which brings me to the second point. While hundreds of billions of dollars were made on the scamdemic fake vaccines, profit was not the primary objective, which was the culling and sickening of the global population, Herr Klaus Schwab of the WEF approved that message. The quicker the global population realizes that this was a carefully planned democidal operation run by the Dept. of "Defense," the more likely they are to survive. These glopshots were in reality obtained from manufacturers you never heard of by the DoD simply as "countermeasures" and were not considered "legally" to be pharmaceuticals or medicines. These DoD countermeasure contracts are the typical format (appropriately) of their weapons system contracts. All the tests that Pfizer and Moderna ran were pure kabuki theater to con the public that these were medicines. The FDA and CDC actually had no jurisdiction over them, unless you want to call Zyklon B a medicine. If this sounds crazy, two expert researchers, **Sasha Latypova and Katherine Watt**, have thoroughly documented it all. Check them out.

diana Mackin → el Gallinazo
22 days ago

You know this stuff about "Not one freaking vaccine in the USA has ever been tested in trials against a saline control group" is not readily findable on any search, right? Do you have a link to the study/ies or even just the claim? I had Del Bigtree's HighWire staff searching for days and though I swear I watched him say it, they could never find the clip or the source. If you have a cite, please, please share!

From memory, Del mentioned attorney Siri, FOIA, and a judge who was appalled/ aghast/ angry that the vaccine manufacturers couldn't produce evidence of a controlled saline study because, they had to admit, there never had been one. Cannot find this!

👍 1 👎 0 Reply • Share ›

etm567 → diana Mackin
22 days ago edited

RFK Jr. says this regularly. And I believe it is in his book The Real Anthony Fauci. According to Kennedy, Fauci said he could provide such a study and would send him one. But he never did. So Kennedy followed up with them, and they eventually admitted it. I don't recall if this was the FDA or NIAID or which bunch of initials, but it is on a website somewhere. But check the book. If I can find it -- I have mislaid the book -- I will come back and post the page. The book also has thousands of endnotes. Everything is sourced. Oh, I should cancel this. Same information below. But do check the book.

title: Informed Consent Action Network v. United Stated Department of Health and Human Services
description per rfk jr: ICAN, represented by RFK Jr., sued HHS due to failure to provide biennial safety vaccine reports to Congress. RFK Jr. specifically asked for evidence of pre-licensure randomized controlled trials (RCT) of the currently scheduled childhood vaccines with placebo groups. That is true placebo groups, not vaccines with antigen removed type control groups, which are not true inert placebos. An example of an inert placebo would be a saline solution. The HHS failed to provide. evidence of a single biennial report to Congress or placebo controlled RCT during pre-licensure...

I don't know if it is ALL vaccines...but I do know that none of the vaccines on the childhood schedule have been tested against a true saline placebo. There is a book called "Turtles All the Way Down: Vaccine Science and Myth by Anonymous. It has all the scientific proof and footnotes, links, etc..you need. Excellent book

Go read 10 vaccine clinical trials, how many of them used a saline control group?

If vaccines are tested against a saline control group then people could share specific studies where this happened.

You are not going to find a peer reviewed paper that admits "there never had been one"

Just like you can't find a study that say shows that "God is not a turtle"

My recent information in this regard comes from RFK Jr. and Del Bigtree. In one memorable event they claim that they approached Francis Collins, then head of NIH and nominally Fauci's boss, and complained about the control groups being tested against either previous licensed vaccines or against an injection with all of the adjuvants included. According to them they asked why not against true saline placebos. They maintain that Collins replied that they never were and never will be. I read RFK Jr.'s Fauci book and was very impressed with its careful factual detail. That Fauci never sued him for libel despite his pugnacious personality also indicates RFK Jr.'s care and truthfulness. Yes, it also came out in court with Alan Siri's cross examinations. Since you claim to be quite the researcher and both of us are obviously interested in the truth about this, if you can send me a link which contains the detailed methodology of the most recent control studies of the MMR vaccine, I will research it as to the exact nature of the control group vaccine "placebo" content and post it here for everybody.

What I'm trying to find is the Aaron Siri/ ICAN FOIA case where the judge was disgusted that the vaccine manufacturers had no saline placebo data -- because it doesn't exist. I have (and love) RFK Jr's The Real Anthony Fauci. But it was on an episode of The HighWire -- which no one can find now, incl me -- that Del mentioned the FOIA request and the judge's reaction. It was such a nice little encapsulation of the issue.

So you decided I was digging at you and you gave it back? Really not necessary, especially since I was not! I was bemoaning the fact this info is so well scrubbed it's been impossible to recoup what I know is there! It's not the MMR, though. It's the fact that NO vaccines have ever been tested with an inert placebo control -- saline. Still digging; not an awesome researcher, just another person who cares about the truth.

Yes, you are correct that I interpreted your reply as antagonistic as opposed to just wanting to have some help finding the Siri reference. I remember the segment pretty vividly and it involved Siri cross examining the "godfather" of vaccines who wrote the "definitive book on vaccines" and who must be about 110 years old. A very arrogant and obnoxious character as one might expect for a natural born killer. It was a pretty long segment and actually involved video of the courtroom. Watching Siri tie him up in knots was quite enjoyable. I would guess it was maybe six months ago. I wouldn't be surprised if it was one of the shows that, other than the Jaxen Report, was totally devoted to Siri's work.

I couldn't find that video you mentioned on the Highwire yet but I have a link that has these documents linked:

I'm happy to be called an 'anti vaxxer' anyone with an ounce of sense is.
They can call me a 'vax denier' if they like.
I have found that those smeared as 'deniers' are the critical thinkers who have assessed the official claims and found them to be a lie used by the globalist powers to advance their evil agenda.
Come to think of it I can't think of an occasion where the term 'denier' isn't just a smear used to cover a lie.

There is really only one solution and that is to discontinue all of them.

toddlers and children's natural immunity protects them, vaccines injure or kill them!

Helps if Mom has real immunity. If she got the childhood illnesses and the protections they conferred. This is so sad! Have we allowed the creation of a culture that now MUST have vaccines repeatedly because the old mechanisms for human health have been destroyed???

How can any person with the most basic education not conclude, we need a rational discussion on vaccines? 'Safe and effective' is a marketing slogan, designed to put the masses brain stem into rest mode. There is a large body within the population who cannot fathom their long ensconced belief in the sanctity of vaccines, could have been shortsighted. The prospect of 'not fully informed' is too emotional for them to grasp. This article provides excellent information, insight and advice toward putting the wellbeing of the 'baby before the bath water.'
